Global Supply Chains in Fragile Reality

Pain Analysis

SupplyShield AI

The Target Audience

Primary Stakeholders: Global Logistics Directors, Fleet Incident Commanders, Port Operations Managers, and Cold-Chain Pharmaceutical Carriers.

These teams manage tens of thousands of simultaneous container shipments across multi-modal maritime, air, and ground transit networks with tight SLA guarantees.

The Core Breakdown

Fragmented Visibility: Unforeseen disruptions (Suez Canal blockages, geopolitical strikes, severe blizzard systems) are siloed in maritime feeds, weather radar, and disconnected ERPs.

Manual Correlation: When an event occurs, operators must manually cross-reference 12+ tools to discover which active shipments are actually trapped on affected routes.

Why It Hurts (Quantified)

\$10B+

ANNUAL DELAY PENALTIES

Demurrage, detention fees, and contractual breach fines.

3–5 hrs

MANUAL MTTR PER INCIDENT

Hours lost coordinating phone trees while cargo sits stranded.

SupplyShield AI: Autonomous Incident Command

Value Proposition

SupplyShield AI

01

 Real-Time Ingestion

Continuously aggregates live port disruptions, labor strikes, and extreme weather alerts, mapping them directly against global transit corridors.

02

 0–100 Risk Engine

Deterministic algorithm calculating real-time risk scores based on cargo priority, disruption severity, deadline proximity, and IoT thermal logs.

03

 Automated Recovery

Generates alternative multi-modal corridors, simulates cost vs. time trade-offs, and redeploys idle fleet capacity in under 30 seconds.

04

 AI Copilot

Conversational operator assistant powered by IBM watsonx.ai Granite 3.0 for instant database querying, risk explanation, and dispatch guidance.

Executive Command Center in Action

Operational Visibility at a Glance

- ▶ **₹6.5M Cargo Value At Risk:** Instant financial exposure aggregated across all shipments on disrupted routes.
- ▶ **Active Disruptions Triage:** Tracks Critical incidents (Suez Canal Blockage with +7d est. delay) and High severity weather storms.
- ▶ **Fleet Utilization Telemetry:** Surfaces 4 idle transport units (including refrigerated trucks) available for immediate dispatch.
- ▶ **One-Click Analyze Workflow:** Direct links to deep impact graphs and recovery plan generators.

⚡ High-Performance React 19 Frontend

Engineered with Vite and TailwindCSS v4 with Recharts visualizers, rendering live system state with sub-millisecond local latency.

Active Shipments & IoT Cold-Chain Safeguards

Algorithmic Risk Index (0–100)

Every active consignment is scored dynamically using 4 deterministic pillars:

- ▶ **Cargo Priority (+20):** Lifesaving vaccines and critical pharmaceuticals.
- ▶ **Disruption Severity (+40):** Maritime port closures and canal obstructions.
- ▶ **Deadline Proximity (+30):** Shipments within 12h–24h of SLA breach.
- ▶ **Thermal Excursion (+40):** Live temperature violating safety bands.

Zero-Tolerance Cold Chain Monitoring

Real Excursion Detected: Shipment SHP-1024 spiked to **+9.1°C** against required 2°C–8°C limits. The system flagged immediate redeployment of Reefer Truck TRK-001 to prevent irreversible batch spoilage.

Natural Language AI Copilot in Action

Conversational Supply Chain Operator

Rather than navigating multi-level filters, operations commanders query database telemetry via natural language:

"Which shipments are most at risk right now?"

- ▶ **Synthesized Intelligence:** Evaluates all 5 active shipments, isolates 2 critical items (SHP-1024, SHP-4112).
- ▶ **Root-Cause Explanation:** Explains exactly why SHP-1024 scored 100/100 (Cargo Priority + Active Disruption + Cold Chain Excursion).
- ▶ **Actionable Dispatch:** Instantly recommends alternative Mediterranean transit corridor rerouting.

Resilient Dual-Mode Execution

Integrates with IBM watsonx.ai Granite 3.0 foundation models with an in-memory rule engine fallback ensuring 100% offline uptime.

System Architecture & End-to-End Pipeline

Full-Stack Tech

SupplyShield AI

Client Tier

React 19 + Vite: Single-page dashboard built for speed and density.

- ▶ **TailwindCSS v4:** Custom design token theme with severity palettes.
- ▶ **Recharts:** Interactive SVG charts for sensor telemetry and risk distribution.
- ▶ **Axios Client:** REST API service layer with JWT auth headers.

Backend Tier

Express 5 REST API: Decoupled microservice architecture.

- ▶ **Modular Controllers:** Auth, Disruptions, Shipments, Fleet, ColdChain, Recovery, Copilot.
- ▶ **Deterministic Risk Service:** Multi-factor calculation engine running in $O(1)$ complexity.
- ▶ **Recovery Simulator:** Trade-off engine evaluating delay reduction vs. extra transit cost.

Data & AI Tier

Zero-Config Relational Store: In-memory prototype store.

- ▶ **Normalized Schema:** Disruptions → Routes → Shipments → Fleet → IoT Logs.
- ▶ **IBM watsonx.ai Granite 3.0:** Generative conversational model endpoint.
- ▶ **Zero Setup Friction:** Runs instantly on any evaluation machine without database setup.

IBM Technology Integration: Bob & watsonx

Load-Bearing Tech

SupplyShield AI

IBM Bob (AI SDLC Partner)

IBM Bob was load-bearing throughout our engineering lifecycle, serving as an autonomous co-developer:

- ▶ **Plan Mode Architecture:** Structured normalized data contracts and route-disruption graph models before writing code.
- ▶ **Agent Mode Execution:** Generated modular Express 5 API controllers, seed datasets, and comprehensive Recharts dashboard widgets.
- ▶ **Automated Code Review:** Diagnosed and fixed Vite PostCSS import order warnings and verified zero-dependency local reproduction.
- ▶ **Terminal Orchestration:** Managed background server daemons and automated test scripts directly via Bob Shell.

IBM watsonx.ai Granite 3.0

Powers the conversational operational intelligence layer of SupplyShield AI:

- ▶ **Incident Summarization:** Distills complex multi-modal disruption telemetry into actionable 2-sentence commander briefings.
- ▶ **Domain Adaptation:** Formats raw shipment manifests and temperature logs into structured prompts for prompt evaluation.
- ▶ **Resilient Fallback Design:** Implements a zero-fail fallback to an in-memory rule engine, ensuring 100% test reproducibility when cloud credentials are unconfigured.

Market Differentiation & Competitive Edge

Capability	Legacy SCM (SAP / Oracle)	APM Observability (Datadog)	SupplyShield AI (Our Solution)
Disruption Ingestion	Manual entry / delayed batch	Infrastructure metrics only	Continuous Real-Time Corridors
Shipment Risk Scoring	Static rule-based flags	None (server/app health only)	Dynamic 0-100 Multi-Factor Index
Mitigation Workflow	Manual phone calls & spreadsheets	Incident alert triggers only	1-Click Automated Recovery Simulation
Cold-Chain IoT Telematics	Post-delivery log review	None	Live Excursion + Fleet Redeployment
Operator Interface	Complex tabular forms	Custom dashboard graphs	Natural Language AI Copilot (watsonx)

Measurable Impact & Production Roadmap

Business Value

SupplyShield AI

Quantified Business ROI

65%

FASTER INCIDENT MTTR

Reduces response time from 4.5 hours to < 30 minutes.

Zero

SPOILAGE TARGET

Immediate reefer redeployment preserves sensitive drugs.

Immediate Cargo Shield: Directly protects ₹6.5M+ of active freight from maritime bottleneck penalties and SLA contractual breaches.

Enterprise Roadmap (Beyond Hackathon)

- ▶ **Phase 1: Real IoT Telemetry Ingestion:** Ingest live MQTT feeds directly from container GPS beacons and digital temperature loggers.
- ▶ **Phase 2: Cloud-Native Scaling:** Migrate in-memory datastore to IBM Cloud Databases for MongoDB deployed on Red Hat OpenShift.
- ▶ **Phase 3: Autonomous Booking Execution:** Integrate direct REST/EDI carrier APIs (Maersk, DHL, FedEx) for one-click contractual rebooking.

Submission Verification & Links

Team 4bit

SupplyShield AI

Ready for Evaluator Inspection

SupplyShield AI is completely built, runs out of the box with zero database configuration, and strictly follows all IBM submission criteria.

- ▶ **Frontend UI:** Running live on <http://localhost:5173>
- ▶ **Backend API:** Running live on <http://localhost:5000>
- ▶ **GitHub Action:** Fully validated against `validate.yml`
- ▶ **Documentation:** Complete docs in `docs/` and `submission.yml`

Verified Project Artifacts

- ▶ **Demo Video (Google Drive):**
